

## CEPH-151 Cloud Native Storage with Ceph and Rook

**Course Length:** 2 days

### Course Description:

CEPH is an open-source distributed and fault tolerant storage system widely used in cloud environments. It can fulfill the storage needs of a Kubernetes environment. Rook is an open source storage manager that allows the integration of Ceph into Kubernetes and helps with the management of the storage cluster.

Participants of this training will learn about the main concept and architecture of Ceph, its installation and daily operation as well as using it in Kubernetes environments.

Besides in-depth theoretical coverage students also do hands-on exercises in their own Kubernetes + CEPH lab system.

**Structure:** 50% theory 50% hands on lab exercises

**Target audience:** System administrators, developers and Devops who want to understand and use Ceph in Kubernetes environments.

**Prerequisites:** Linux system administration, networking and storage knowledge
